SUMMARY

Unity Game Programmer with over 3 years of engine experience, including nearly 2 years of professional experience shipping multiplayer titles for Android, iOS and WebGL. Skilled in full-cycle development, from implementing gameplay mechanics, troubleshooting and creating AI behaviours to managing networking, custom API integrations, and database systems. Proven ability to deliver optimized, polished products across mobile and web platforms.

EXPERIENCE

Game Programmer, Parody Studios Oct 2024 - Present

- Independently completed and released two multiplayer titles by building robust systems around existing core mechanics, including different game modes, tutorials, player authentication, UI/UX, server-side validation and optimisation along with custom admin panels.
- Developed the core gameplay loop, UI, and audio integration for an in-house playable demo, alongside spearheading R&D on Animation Rigging for procedural animations that were integrated into subsequent production builds.
- Collaborated with the art team to integrate assets into the game engine, implementing ragdoll physics, custom shaders, and responsive UI animations to achieve a polished product.
- Implemented secure backend pipelines using Firebase and Playfab, engineering custom matchmaking logic via User IDs, managing custom API integrations and database systems to handle a wide range of multiplayer functionalities, including matchmaking, in-game events, and complete player state synchronisation.
- Participated in game design sessions to analyze mechanics and devise optimised solutions for technical challenges across all departments.

SKILLS

Programming Languages	C#
Game Engines	Unity (2D/3D, UGUI, Physics, Animation)
Backend & Network	Firebase(Cloud Functions, Auth), Unity Netcode, PlayFab, REST APIs
Platforms	Android, WebGL, iOS (Unity codebase adaptation & optimization)
Tools	Git, Unity Profiler, Unity Recorder, Postman

EDUCATION

Bachelor of Technology in Electronics and Communication Engineering
Indian Institute of Information Technology Pune 2019 - 2023

PROJECTS

Real-Time Multiplayer Hand Cricket|Unity, C#
Built a performance-optimised (34MB apk), up to 5v5 team-based multiplayer game utilizing Unity Netcode, Relay, and Lobby services for gameplay. Utilised custom RPCs and network variables for efficient client-server communication and local simulation. Also engineered seamless cross-platform compatibility to maintain flawless gameplay across both Android and WebGL builds.

State-Based 2D Boss Fight|Unity, C#
Designed a modular boss AI using Finite State Machines to manage complex behavior transitions, attack patterns, and animation events across multiple combat phases.

Infinite Runner with Custom Shader|Unity, C#
Created a custom vertex shader to simulate world curvature and implemented procedural environment and obstacle generation logic. Integrated a multi-character selection featuring character-specific defeat animations with a seamless restart logic.
