SUMMARY

Unity Generalist Game Programmer with 2 years of experience shipping commercial multiplayer and WebGL titles across Android, iOS, and browsers. Skilled in full-cycle development, bridging core gameplay mechanics, procedural animations, and AI behaviors with authoritative netcode, LiveOps backends, and low-end device optimization.

EXPERIENCE

Game Programmer, Parody Studios Oct 2024 - Sept 2026

- **Multiplayer Production & Optimization:** Independently drove full-stack development and late-stage release for two commercial multiplayer titles on Android and iOS; built game modes, tutorials, anti-cheat, and LiveOps admin panels, while executing tier based asset compression that cut APK size by 80%+ (1GB+ to 170MB).
- **Gameplay Prototyping, Physics & R&D:** Developed the complete core gameplay loop and ragdoll physics systems for an in-house playable demo, alongside spearheading R&D on Unity Animation Rigging for procedural animations integrated into production builds.
- **Art Tech, Pipelines & UI Polish:** Collaborated with the art team to implement custom shaders and responsive UI/UX, while scripting a runtime character-swapping pipeline on a unified rig to drastically cut animation production overhead.
- **Authoritative Netcode & Backends:** Implemented secure backend pipelines using Firebase (Cloud Functions, custom JWT auth) and PlayFab; engineered skill-based matchmaking, resolved high latency client desyncs via authoritative outcome syncing, and restructured caching/queries to slash daily database bandwidth by 95%.

SKILLS

Programming Languages	C#
Game Engines	Unity (2D/3D, UGUI, Physics, Animation)
Backend & Network	Firebase (Cloud Functions, Auth), Unity Netcode, PlayFab, REST APIs, OneSignal
Platforms	Android, WebGL, iOS
Tools	Git, Unity Profiler, Postman, UI Toolkit, DOTween

EDUCATION

Bachelor of Technology in Electronics and Communication Engineering
Indian Institute of Information Technology Pune 2019 - 2023

PROJECTS

Real-Time Multiplayer Hand Cricket | Unity, C#
Built a performance optimised (34MB apk), up to 5v5 team-based multiplayer game utilizing Unity Netcode, Relay, and Lobby services for gameplay. Utilised custom RPCs and network variables for efficient client-server communication and local simulation. Also engineered seamless cross-platform compatibility to maintain flawless gameplay across both Android and WebGL builds.

Interactive WebGL Portfolio | Unity UI Toolkit, C#, JavaScript
Engineered a data-driven WebGL portfolio engine utilizing JSON case studies to maintain around 5MB initial load size. Wrote a custom C# resize observer to mimic CSS media queries and a two-way JS bridge binding browser history directly to Unity UI transitions.

Finquest (Educational WebGL App) | Unity, C#, DOTween
Developed an optimized WebGL application in around 2 weeks (7.5MB footprint) utilizing a single scene cached architecture to eliminate browser hitching. Built custom JS wrappers for seamless Flutter WebView integration and decoupled content logic using hierarchical ScriptableObjects.
